EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jerry Yetter on August 28, 2006.

The application has been amended as follows.

In the claims:

- **Please cancel claims 1 and 3-18.**

(NOTE: Applicant's representative stated that applicant wishes to reserve to the right to file a continuing application to pursue the cancelled claimed subject matter, without prejudice to such.)

Please amend claim 19 to read as follows:

Claim 19. A method for reducing the level of acrylamide formation in cocoa beans which comprise soluble materials and asparagine using an asparaginase-reducing enzyme, said method comprising the step of extracting at least a portion of asparagine from said cocoa beans to form an extract, contacting said extract with said enzyme for a sufficient amount of time to reduce the level of asparagine at least about 10%, ~~[as compared with a control sample prepared in exactly the same manner as the enzyme-treated sample with the exception that said enzyme is not added,]~~ and adding back at least a portion of said extract comprising said soluble materials to at least a portion of said cocoa beans, followed by roasting said beans.

Art Unit: 1761

The following is an examiner's statement of reasons for allowance:

With regard to the applicability of the previous prior art rejection over Elder et al., to instant claims 19-22, the examiner concurs with applicant's statements at page 6 of the response of July 21, 2006, in that

No suggestion (or even recognition) is made of the need to remove the asparagine, but to return the other, desirable extractables to the beans. Certainly, no suggestion is made of leaching into a dominant bath to achieve equilibrium and then driving the asparagine extraction from the beans forward by removing it from the bath enzymatically, while retaining the other extractables in the beans.

Claims 19-22 are thus distinguished from Elder et al. in this regard, and there is no teaching or suggestion to carry out the instantly-claimed steps for producing a cocoa bean with a reduced amount of asparagine, and thus upon roasting, a reduced amount of acrylamide formation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Keith Hendricks whose telephone number is (571) 272-1401. The examiner can normally be reached on M-F (8:30am-6pm); First Friday off.
